SPECIFICATIONS LIGHT OBSCURATION PARTICLE COUNTER KL-04A

3-20-41 Higashimotomachi, Kokubunji, Tokyo 185-8533, Japan

Outline

The light obscuration particle counter KL-04A detects particles suspended in a fluid and measures their size and number concentration using the light-obscuration method.

The unit is an automatic particle measurement system specially designed for process step control and quality management for example at medical production. The light-obscuration principle is optimal for performing insoluble particulate matter tests for injections as prescribed by the Japanese Pharmacopeia (JP), United States Pharmacopeia (USP), European Pharmacopeia (EP), and Korean Pharmacopeia (KP).

The unit also provides compliance with regulations for electronic records and signatures, such as "21 CFR Part 11: Electronic Records; Electronic Signatures" by the American FDA. However, signature support is provided for handwritten signatures only.

The features of the unit are as follows.

- Measurable particle size range of 1.3 to 100 μm.
- Flow rate is 25 mL / min.
- Built-in syringe pump enables measurement without connecting to other flow control systems.
- Able to set 20 channels of measurable particle size range.
- Built-in hard disk can save several years of measurement data.
- USB flash drive enables backups and restoration of data saved on the hard disk.
- The measurement data can be exported in TSV (Tab Separated Values) format by using the USB flash drive.
- A printer (PostScript Level 2 and above) can be connected to print out the measurement results.
- Conformance with the instrument standardization (Calibration, Performance-Test) of the Japanese Pharmacopeia (JP), United States Pharmacopeia (USP) and Korean Pharmacopeia (KP).
 - RION Co., Ltd. will carry out a standardized system test (Calibration, Performance-Test) as a factory option.
- Whether the measurement result is acceptable or not can be decided.
- An external display can be connected.
- All major operations affecting electronic records such as measurement data creation, modification, and deletion are recorded as audit trail information which can be viewed and printed.
- Access control for functions such as measurement data modification and deletion can be set for individual operators.
- Data output to a computer is possible via a serial link, using the optional USB-RS-232C conversion cable.
 - * All company names and product names mentioned in this specifications are trademarks or registered trademarks of their respective owners.

Specifications

Optical system Light-obscuration method

Light source Laser diode (rated output: 3 mW, wavelength: 780 nm)

Laser product class Class 1, IEC 60825-1 (2007)

Class 3B laser is used in the internal particle detection mecha-

nism.

Light detector PIN type photodiodes

Materials of component parts exposed to sample fluid

Sampling tube PFA, (SUS304 as option)

Sensor area Synthetic quartz, PFA, perfluoro (fluorocarbon rubber)

Syringe pump Borosilicate Glass, Kel-F (PCTFE), PTFE, PFA

Tube / Packing / Connector

PTFE, PCTFE

Sample container plate Polyacetal

Allowable sample fluid type

Fluids which do not cause corrosion to the parts in contact with

the fluid

Calibration Using polystyrene latex (PSL) particles (refractive index 1.6) in

pure water

Minimum detectable particle size

1.3 µm

Measurable particle size range

1.3 to 100 µm (when using PSL particles in pure water)

Size range Selectable arbitrarily from 1 to 20 channels

Counting efficiency 100±5% (when measuring PSL particles of 10 µm in pure water

and comparing the count of more than 5 µm with a reference

unit)

Flow rate 25 mL / min (10 mL / min as factory option)

Maximum particle number concentration

10000 particles / mL (when the counting loss is 10% in the vicin-

ity of 10 µm PSL particles in pure water)

Size resolution 10% or less (in the vicinity of 10 µm PSL particles in pure wa-

ter)

Threshold accuracy 5% or less (when particle number concentration is less than 6000

particles / mL in the vicinity of 10 µm and 15 µm PSL particles

in pure water)

Sampling flow rate accuracy

Within 2% (when measuring 10 mL volume)

Sampling volume accuracy

Within 2% (when measuring 10 mL volume)

Instrument Standardization at each regional pharmacopeia (factory option)

JP

Calibration Particle size calibration using the calibrated particles of 1.3 to 100 µm

which have domestic and international traceability have a margin of error of less than 3%. However, our own specified method will

be carried out for the calibration of less than 4 µm.

Performance-Test Sample volume accuracy test

Flow rate accuracy test

Particle counting accuracy test, threshold accuracy test and sensor resolution test using Clintex (Particle Count Reference Standard

Suspension), which is manufactured by JSR.

USP

Calibration Particle size calibration using the calibrated particles of 1.3

to 100 μm , which are traceable and NIST standard reference materials. However, our own specified method will be carried

out for calibration of less than 4 µm.

Performance-Test Sample volume accuracy test

Flow rate accuracy test

Counting accuracy test and Ratio value test using USP-PC-RS

(USP Particle Count Reference Standard)

Sensor resolution test using calibrated particles of 10 µm.

KP

Calibration Particle size calibration using the calibrated particles of 1.3 to 100 µm

which have domestic and international traceability have a margin of error of less than 3%. However, our own specified method will

be carried out for the calibration of less than 4 µm.

Performance-Test Sample volume accuracy test

Flow rate accuracy test

Particle counting accuracy test, threshold accuracy test and sensor resolution test using Clintex (Particle Count Reference Standard

Suspension), which is manufactured by JSR.

EP

Calibration Applied to JP or USP*
Performance-Test Applied to JP or USP*

* EP has no regulations about Calibration and Performance-Test

Syringe pump

Measurement Sampling flow rate 25 mL / min

Range of drain flow rate 5 mL/min to 100 mL/min

Flushing Range of sampling flow rate 5 mL/min to 100 mL/min

Range of drain flow rate 5 mL/min to 100 mL/min

Sample container size

Maximum size (diameter)

Beaker 300 mL (JIS R 3503)

Maximum height Tall beaker 200 mL (JIS R 3503)

Sample container plate Internal diameter 77 mm, depth 5 mm

Sample fluid dead volume

0.5 mL or less

(Volume of air pocket from tip of sampling tube to detector section)

Maximum sample fluid pressure

50 kPa

Maximum sample fluid viscosity

30 mPa \cdot s (at 25°C)

Sample fluid temperature range

+15°C to +30°C (no condensation on flow cell)

Sample port

INLET Sample fluid inlet

Supplied sampling tube is to be connected to the INLET within

the sensor area.

OUTLET Sample fluid outlet

 $2 \text{ mm} \times 3 \text{ mm}$ dia. flange tube is to be connected to the OUTLET

of the syringe pump.

Display 6.5 inch color LCD

Input / Output connectors

PRINTER Parallel port (IEEE1284 compatible, 25 pin D-sub female type

connector) to connect to a printer (supporting PostScript Level 2

and above).

ETHERNET Interface to connect to a LAN (10 / 100Base-T)

DISPLAY Interface to connect to a display.

(Analogue RGB, 15 pin high density D-sub female type connec-

tor, Resolution: 640×480 pixels,

Scanning frequency: vertical 60 Hz/horizontal 31.5 kHz)

Connected to the built-in display when shipped.

KEYBOARD Interface to connect to a keyboard

For connection of supplied keyboard

USB (2 front panel ports, 1 rear-panel port)

For connecting devices with USB interface (USB 2.0, type A

female connector)

For connection of supplied mouse, USB flash drive etc.

Power 100 V to 240 V AC, 50 / 60 Hz, Approx. 100 VA

Environmental Requirements

Operational Environments

Indoor Use Only

Altitude Up to 2000 m

Supply Voltage Fluctuations

100 V to 240 V AC $\pm 10\%$

Installation Category 2
Pollution Degree 2

Environmental conditions for operation

+15°C to +30°C, 20% to 80% RH (no condensation)

Environmental conditions for storage

-10°C to +50°C, 90% RH or less

(no condensation and no freezing of internal piping)

Dimensions Approx. $369 (H) \times 400 (W) \times 280 (D) mm (maximum)$

Approx. 363 (H) \times 358.5 (W) \times 236 (D) mm (excluding protrud-

ing parts)

Weight Approx. 13 kg

Supplied accessories PFA sampling tube (2 mm × 4 mm dia., length 10 cm) set 1

(includes a nut)

Drain tube $(2 \text{ mm} \times 3 \text{ mm dia., length } 1.5 \text{ m})$ set

(includes a connector and a piece of packing)

Mouse 1

1

1

Keyboard 1
Power cord 1

USB flash drive (for backup)

Cell cleaning brush (included in one case) 2

Screw (M4×10) for mounting electromagnetic stirrer

Instruction manual

Instruction manual Instruction manual (for Administrator)

Liquid-borne particle counter usage precautions

Inspection certificate

Optional accessories

PFA Sampling tube (2 mm \times 4 mm dia., length 10 cm) set

(includes a nut)

SUS Sampling tube (2 mm \times 3 mm dia., length 10 cm) set

(includes a nut and 2 pieces of packing)

SUS Sampling tube (1 mm × 2 mm dia., length 10 cm) set

(includes a nut and 2 pieces of packing)

Electromagnetic stirrer Cimarec i Micro

Stirring bar

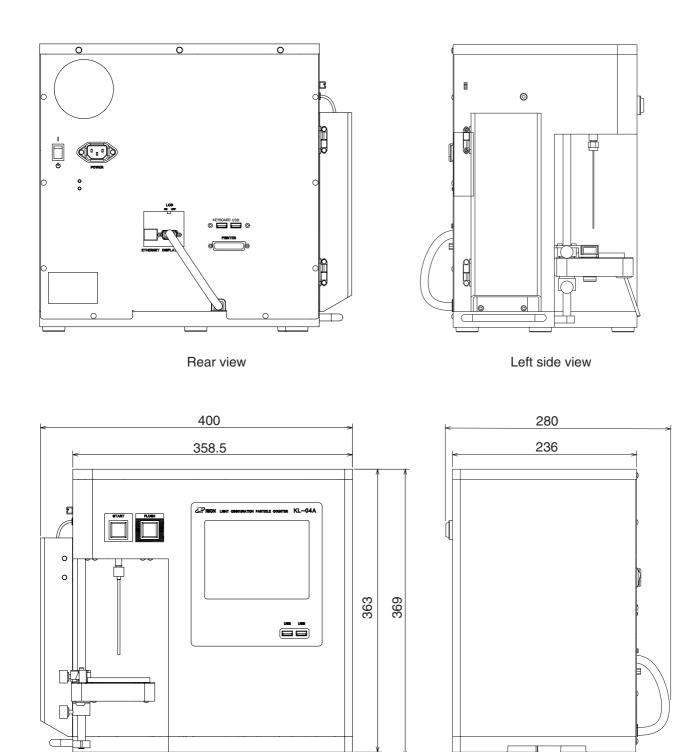

USB flash drive

USB-RS-232C conversion cable

Printer (support PostScript Level 2 and above)

Printer cable (parallel)

USB cable (2 m)

Unit: mm
